

**Revenue and Costs for
Corn, Soybeans, Wheat, and Double-Crop Soybeans,
Actual for 2011 through 2017, Projected 2018**

Introduction

Gary Schnitkey
Department of Agricultural and Consumer Economics
University of Illinois

June 2018

This publication presents revenues and costs for producing corn, soybeans, wheat, and double-crop soybeans in three regions of Illinois: northern, central, and southern Illinois. Central Illinois is further divided into categories for high-productivity farmland and low-productivity farmland. Divisions between high and low farmland productivity are made based on soil productivity ratings. Generally, farms with higher soil productivity ratings have higher yields. Between 2012 and 2017, corn yields on high productivity farmland averaged 202 bushels per acre while corn yields on low productivity farmland averaged 189 bushels.

This publication includes ten tables:

1. Corn Revenue and Costs, Northern Illinois
2. Soybean Revenue and Costs, Northern Illinois
3. Corn Revenue and Costs, Central Illinois with High Productivity Farmland
4. Soybean Revenue and Costs, Central Illinois with High Productivity Farmland
5. Corn Revenue and Costs, Central Illinois with Low Productivity Farmland
6. Soybean Revenue and Costs, Central Illinois with Low Productivity Farmland
7. Corn Revenue and Costs, Southern Illinois
8. Soybean Revenue and Costs, Southern Illinois
9. Wheat Revenue and Costs, Southern Illinois
10. Double-Crop Soybean Revenue and Costs, Southern Illinois

Each table shows revenues and costs for 2011 through 2017. These financial results are summarized from grain farms enrolled in Illinois Farm Business Farm Management. Values for 2018 are projections made based on expected yields, prices on futures exchanges, and input prices.

All revenues associated with crop production are included in the tables. Revenues include crop revenue, Agricultural Risk Coverage (ARC) payments, Price Loss Coverage (PLC) payments, Average Crop Revenue Election (ACRE) payments, other government payments, and crop insurance payments. Crop revenue represents returns from marketed grain and equals yield times price per bushel. Price per bushel represents a market year average price that farmers received for grain. Crop insurance represents average indemnity payments from crop insurance.

Non-land costs are divided into 1) direct costs – costs that can be directly attributable to the production of the crop, 2) power costs – costs generally related to machinery operations, and 3) overhead costs – costs associated with general operation of the farm.

These costs are accrued so that they are associated with the year of production. For example, fertilizer costs for 2016 may have been incurred in 2015. Any fertilizer expense associated with 2016 production paid in 2015 is in the 2016 budget values.

Subtracting non-land costs from revenue yields “operator and land return”. This is the return remaining to pay for farmland and provide a return to the operator. In a cash rent situation, the payment for farmland is cash rent. If the operator and land return is \$170 per acre and cash rent is \$150 then the farmer return is \$20 per acre.

An average land costs is included in this publication. Land costs represent a charge for use of the land. In this publication, land costs equal the average cash rent paid by farmers to land owners. This data is obtained from the Nationally Agricultural Statistical Service. Other means of controlling farmland, such as owning farmland or share-renting farmland, could have different costs.

Farmer return is then reported. Farmer return equals operator and land return minus land costs. This is the amount that farmers have to provide a return for unpaid labor, equity capital invested in the farm, and management. Farmer return is equivalent to net farm income per acre.

Acknowledgments: Much of the data used in these budgets comes from the local Farm Business Farm Management (FBFM) Associations across the State of Illinois. Without their cooperation, information as comprehensive and accurate as this would not be available for educational purposes. FBFM, which consists of 5,500 plus farmers and 60 professional field staff, is a not-for-profit organization available to all farm operators in Illinois. FBFM field staff provides on-farm counsel with computerized recordkeeping, farm financial management, business entity planning and income tax management. For more information, please contact the State FBFM Office located at the University of Illinois Department of Agricultural and Consumer Economics at 217-333-5511 or visit the FBFM website at www.fbfm.org.
